Fell to ground level. •T2 (481) Common Ash Fell to ground level Comment: Tree is one sided and suppressed by neighbouring tree that has been recommended for removal. Specified to fell as the tree will have very little amenity value when neighbour is removed. •T3 Common Ash Fell to ground level. Comment: Tree has signs of ash dieback and poor vitality. Large lateral over standing traffic. •T4 Common Ash Fell to ground level Comment: Early stages of Ash dieback more apparent in western canopy. Consider removal with neighbouring trees due to logistics of tree removal in this area. •T5 Common Ash Reduce lateral limbs Comment: Tree has low vitality with dieback concentrated with top of main main leader. Lateral limbs appearing more dominant but unwanted growth habit. Reduce lateral limbs by 2 metres where possible to encourage more inner canopy growth. Remove major deadwood and reinspect 6 months to check vitality in full leaf.
